

Intelligent Network Vulnerability Scanner Report

Target: 127.0.0.1
Scan Date: 2026-05-05 17:28:15

Open Ports & Services

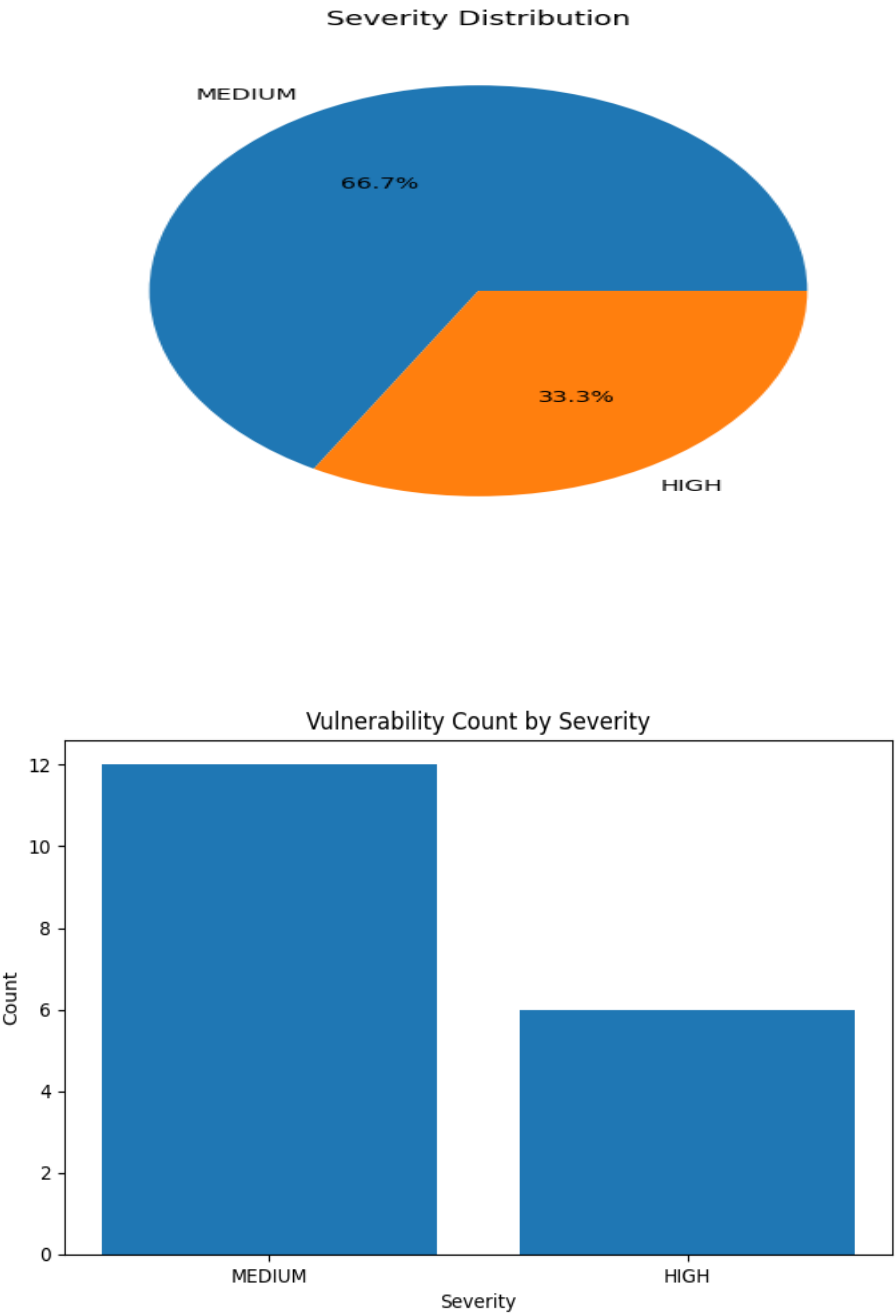

Port	Service	Version
135	msrpc	
445	microsoft-ds	
3306	mysql	8.0.28
5000	http	3.0.3
7000	http	

Detected Vulnerabilities

Port	CVE	CVSS	Severity
135	CVE-2002-1873	5.0	MEDIUM
135	CVE-2013-4688	7.8	HIGH
445	CVE-2002-0597	5.0	MEDIUM
3306	CVE-2022-21412	4.9	MEDIUM
3306	CVE-2022-21413	4.9	MEDIUM
3306	CVE-2022-21414	4.9	MEDIUM
3306	CVE-2022-21415	4.9	MEDIUM
3306	CVE-2022-21417	4.9	MEDIUM
5000	CVE-2001-0394	5.0	MEDIUM
5000	CVE-2009-2299	5.0	MEDIUM
5000	CVE-2010-1622	6.0	MEDIUM
5000	CVE-2015-1060	5.8	MEDIUM
5000	CVE-2020-35681	7.4	HIGH
7000	CVE-1999-0236	7.5	HIGH
7000	CVE-1999-1068	5.0	MEDIUM
7000	CVE-1999-0071	7.5	HIGH
7000	CVE-1999-0267	7.5	HIGH

7000	CVE-1999-1207	7.5	HIGH
------	---------------	-----	------

Visual Analysis

Mitigation Suggestions

Service: msrpc

Severity: MEDIUM

Suggestions:

- Update the software/service to the latest version.
- Use firewall rules to restrict access.
- Disable unused services and ports.
- Use strong authentication and passwords.
- Continuously monitor system logs and alerts.

Service: msrpc

Severity: HIGH

Suggestions:

- Update the software/service to the latest version.
- Use firewall rules to restrict access.
- Disable unused services and ports.
- Use strong authentication and passwords.
- Continuously monitor system logs and alerts.

Service: microsoft-ds

Severity: MEDIUM

Suggestions:

- Update the software/service to the latest version.
- Use firewall rules to restrict access.
- Disable unused services and ports.
- Use strong authentication and passwords.
- Continuously monitor system logs and alerts.

Service: mysql

Severity: MEDIUM

Suggestions:

- Update the software/service to the latest version.
- Use firewall rules to restrict access.
- Disable unused services and ports.
- Use strong authentication and passwords.
- Continuously monitor system logs and alerts.
- Restrict database access to trusted hosts only.

Service: mysql

Severity: MEDIUM

Suggestions:

- Update the software/service to the latest version.
- Use firewall rules to restrict access.
- Disable unused services and ports.
- Use strong authentication and passwords.
- Continuously monitor system logs and alerts.
- Restrict database access to trusted hosts only.

Service: mysql

Severity: MEDIUM

Suggestions:

- Update the software/service to the latest version.
- Use firewall rules to restrict access.
- Disable unused services and ports.
- Use strong authentication and passwords.
- Continuously monitor system logs and alerts.
- Restrict database access to trusted hosts only.

Service: mysql

Severity: MEDIUM

Suggestions:

- Update the software/service to the latest version.
- Use firewall rules to restrict access.
- Disable unused services and ports.
- Use strong authentication and passwords.
- Continuously monitor system logs and alerts.
- Restrict database access to trusted hosts only.

Service: mysql

Severity: MEDIUM

Suggestions:

- Update the software/service to the latest version.
- Use firewall rules to restrict access.
- Disable unused services and ports.
- Use strong authentication and passwords.
- Continuously monitor system logs and alerts.
- Restrict database access to trusted hosts only.

Service: http

Severity: MEDIUM

Suggestions:

- Update the software/service to the latest version.
- Use firewall rules to restrict access.
- Disable unused services and ports.
- Use strong authentication and passwords.
- Continuously monitor system logs and alerts.

Service: http

Severity: MEDIUM

Suggestions:

- Update the software/service to the latest version.
- Use firewall rules to restrict access.
- Disable unused services and ports.
- Use strong authentication and passwords.
- Continuously monitor system logs and alerts.

Service: http

Severity: MEDIUM

Suggestions:

- Update the software/service to the latest version.

- Use firewall rules to restrict access.
- Disable unused services and ports.
- Use strong authentication and passwords.
- Continuously monitor system logs and alerts.

Service: http

Severity: MEDIUM

Suggestions:

- Update the software/service to the latest version.
- Use firewall rules to restrict access.
- Disable unused services and ports.
- Use strong authentication and passwords.
- Continuously monitor system logs and alerts.

Service: http

Severity: HIGH

Suggestions:

- Update the software/service to the latest version.
- Use firewall rules to restrict access.
- Disable unused services and ports.
- Use strong authentication and passwords.
- Continuously monitor system logs and alerts.

Service: http

Severity: HIGH

Suggestions:

- Update the software/service to the latest version.
- Use firewall rules to restrict access.
- Disable unused services and ports.
- Use strong authentication and passwords.
- Continuously monitor system logs and alerts.

Service: http

Severity: MEDIUM

Suggestions:

- Update the software/service to the latest version.
- Use firewall rules to restrict access.
- Disable unused services and ports.
- Use strong authentication and passwords.
- Continuously monitor system logs and alerts.

Service: http

Severity: HIGH

Suggestions:

- Update the software/service to the latest version.
- Use firewall rules to restrict access.
- Disable unused services and ports.
- Use strong authentication and passwords.
- Continuously monitor system logs and alerts.

Service: http
Severity: HIGH
Suggestions:

- Update the software/service to the latest version.
- Use firewall rules to restrict access.
- Disable unused services and ports.
- Use strong authentication and passwords.
- Continuously monitor system logs and alerts.

Service: http
Severity: HIGH
Suggestions:

- Update the software/service to the latest version.
- Use firewall rules to restrict access.
- Disable unused services and ports.
- Use strong authentication and passwords.
- Continuously monitor system logs and alerts.

Final Risk Summary

This assessment identifies open ports, vulnerable services, and associated CVEs with CVSS-based prioritization. Immediate attention is recommended for HIGH and CRITICAL vulnerabilities.
