

Intelligent Network Vulnerability Scanner Report

Target: 127.0.0.1
Scan Date: 2026-05-06 20:21:51

Open Ports & Services

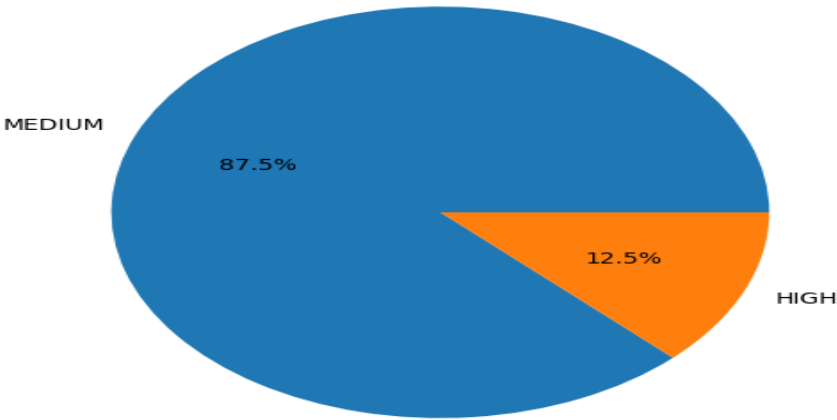

Port	Service	Version
135	msrpc	
445	microsoft-ds	
3306	mysql	8.0.28

Detected Vulnerabilities

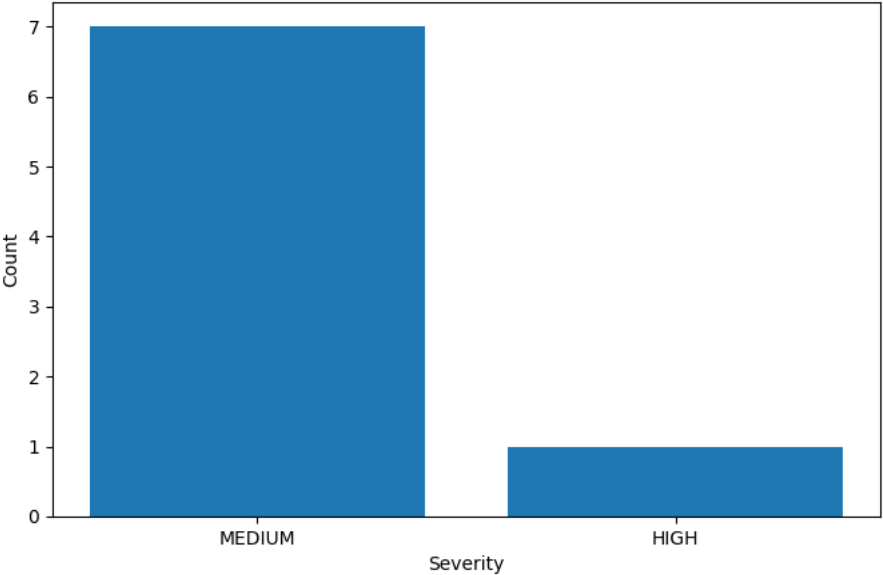

Port	CVE	CVSS	Severity
135	CVE-2002-1873	5.0	MEDIUM
135	CVE-2013-4688	7.8	HIGH
445	CVE-2002-0597	5.0	MEDIUM
3306	CVE-2022-21412	4.9	MEDIUM
3306	CVE-2022-21413	4.9	MEDIUM
3306	CVE-2022-21414	4.9	MEDIUM
3306	CVE-2022-21415	4.9	MEDIUM
3306	CVE-2022-21417	4.9	MEDIUM

Visual Analysis

Severity Distribution

Vulnerability Count by Severity

Mitigation Suggestions

Service: msrpc

Severity: MEDIUM

Suggestions:

- Block RPC ports (135, 139) at the perimeter firewall.
- Apply all Windows security patches immediately.
- Disable unused RPC services via Group Policy.
- Monitor RPC traffic for unusual patterns.
- Restrict RPC access to trusted internal hosts only.

Service: msrpc

Severity: HIGH

Suggestions:

- Block RPC ports (135, 139) at the perimeter firewall.
- Apply all Windows security patches immediately.
- Disable unused RPC services via Group Policy.
- Monitor RPC traffic for unusual patterns.
- Restrict RPC access to trusted internal hosts only.

Service: microsoft-ds

Severity: MEDIUM

Suggestions:

- Disable SMBv1 immediately.
- Block SMB port 445 at the firewall for external access.
- Apply all Windows patches, especially MS17-010 (WannaCry).
- Enable SMB signing to prevent relay attacks.
- Restrict SMB access to trusted internal hosts only.

Service: mysql

Severity: MEDIUM

Suggestions:

- Never expose MySQL port (3306) to the internet.
- Use strong passwords and remove anonymous/default accounts.
- Restrict DB access to localhost or specific IPs only.
- Keep MySQL updated to the latest stable version.
- Audit privileges and remove unnecessary GRANT permissions.

Final Risk Summary

This assessment identifies open ports, vulnerable services, and associated CVEs with CVSS-based prioritization. Immediate attention is recommended for HIGH and CRITICAL vulnerabilities.
